MIA-Smart Helmet

It ensures that security personnel can measure the targeted person's fever in the crowded area and detect people with suspected health conditions day / night without contact. In addition, thanks to its license plate and face recognition capability, it has the ability to measure feve and report by matching the plate with the person in the vehicle.

- Single Person Fever Detection
- Fever Detection in Crowd
- Facial Recognition
- Plate Recognition
- QR Code Mode
- Night Vision

It is a suitable solution for all institutions that need high security measures. In addition to detecting the metal on the person with the metal detector, it measures the body temperature of the person without contact with its thermal camera and displays it on the screen. It also generates an alarm when it detects high fever.
